QUARTERLY ACTIVITIES REPORT
FOR THE PERIOD ENDED 30th SEPTEMBER 2021

During the quarter, Oakajee Corporation Ltd (“**Oakajee**” or “**the Company**”) continued with the desk top review of its Paynes Find Gold project in Western Australia and Birrindudu Nickel project in the Northern Territory.

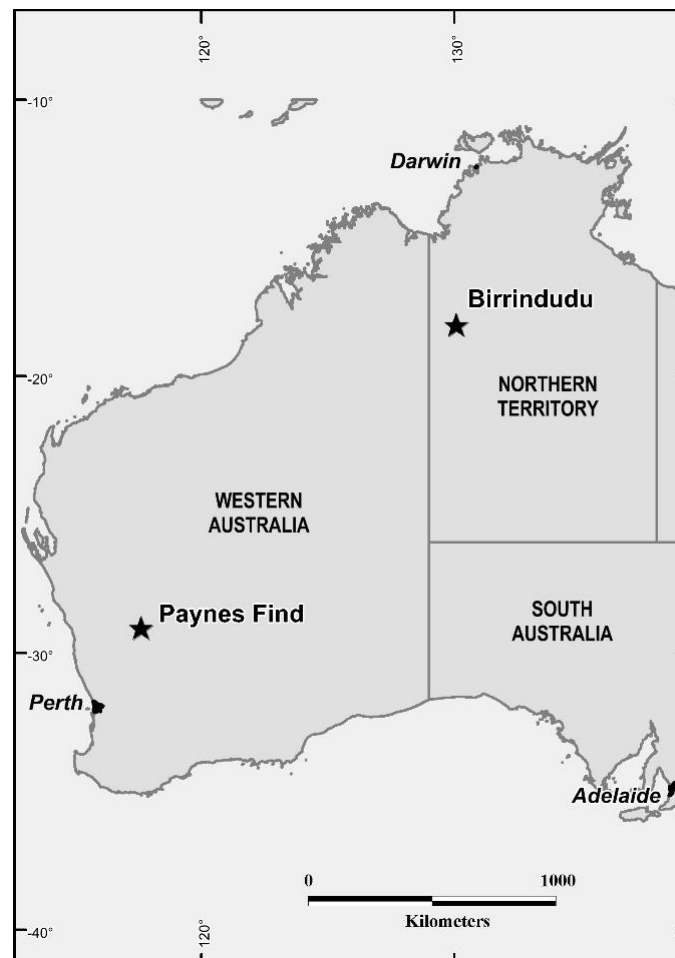

Figure 1 - Project location.

Birrindudu Nickel Project - Northern Territory

As previously reported, Oakajee received permitting to drill test mafic to ultramafic intrusions identified in historic drilling. Independence Group (IGO) held part of the current project between 2010 and 2014 exploring for tin, gold and nickel. Work included Air Core drilling at the Jumping Jack Prospect where 128 holes were drilled for 5,636 metres. Assay results from five of the RAB holes returned strongly anomalous nickel, copper, platinum and palladium results associated with logged ultramafic rocks.

Oakajee has been unable to secure suitable contractors to complete the planned drilling testing of the magmatic nickel-copper sulphide targets and with the onset of the northern wet season this work is deferred to the 2022 field season.

Paynes Find Gold Project - Western Australia

The infill soil sampling over the Paynes Find North gold and base metal target is now planned to be completed in the December 2021 Quarter.

At Paynes Find North soil sampling on a 200m x 50m grid over 2km of strike identified multiple Au-Cu anomalies (See September 2020 Quarterly). At the northern end of the Au-Cu anomalies there is a distinctive zone of Cu-Pb-Zn anomalism that is open to the north. Rock chip sampling of a small gossanous quartz vein returned assays of up to 0.6g/t Au, 440g/t Ag 1.2% Cu, 9.6% Pb, 0.36% Zn. One RC hole was drilled in 2017 under the same gossanous vein returned 6m @ 18.4g/t Ag, 0.43% Pb and 0.19% Zn and 2m @ 0.4% Cu, 0.24g/t Au. This mineralisation is likely to extend north beneath the Au-Cu-Pb-Zn soil anomaly which extends for 400m open to the north with no drill testing. This target is considered to have potential to discover a high-grade gold deposit analogous to the Penny Gold Mine currently being developed by Ramelius Resources. Gold mineralization at the Penny Gold mine is hosted in a quartz sulphide lode and the gold has a strong correlation with base metal sulphides including galena, sphalerite and chalcopyrite.

Paynes Find Lithium Potential Review

Oakajee Corporation began a review of the lithium potential during the quarter. The review is currently incomplete and will continue into the current quarter.

Rare metal lithium pegmatite exploration in the Paynes find district was largely restricted to the Mt Eden area within the current Paynes Find project on the southern tenements, E59/2092 and E59/2055. In this area there was some feldspar mining in the mid 1970s (WAMEX A19207) and exploration of an alluvial/eluvial tantalum resource (1982, WAMEX A11424). The feldspar mining also reported recovery of small quantities of spodumene. Oakajee corporation does not own lithium rights here but does own the rare pegmatite rights to the northern tenements block E59/2391 and E59/2312. Exploration in the northern tenement block appears to be sparse in comparison to the Mt Eden area. Several pegmatites have been noted within E59/2312 during mapping and exploration for gold though no systematic evaluation of the lithium potential has been completed. Haddington International Resources (WAMEX A64966) reports minor reconnaissance work including a radiometric survey to identify pegmatites beneath shallow cover. Haddington reported the radiometric survey was successful though no follow-up exploration has been identified.

Oakajee plans to complete the lithium review and follow-up with surface sampling were appropriate.

Financial Position/Corporate

As at 30 September 2021, the Company had a balance of \$3,695,000 in liquid assets comprising \$1,540,000 of cash and shares held in listed entities with a market value of \$2,155,000. At 30 September 2021 and also at the date of this report, the Company's shareholdings in listed entities comprised the following securities:

Santa Fe Minerals Limited	11,000,000 fully paid ordinary shares (SFM)
Firefinch Limited	2,000,000 fully paid ordinary shares (FFX)

The Company also continues to assess other potential exploration/development projects in the resources sector.

This ASX announcement has been authorised for release by the Board.
