

ASX Reinstatement and Corporate Update

Blina Minerals NL (ASX: BDI) (**Blina Minerals** or the **Company**) is pleased to provide shareholders with an update in relation to the reinstatement of the Company to Official Quotation on the ASX.

As shareholders are aware, the Company was suspended from Official Quotation on the ASX on 18 March 2020. Since that date, the Company and its Board have been working with our legal advisors and the ASX to seek approval from the ASX to allow the Company to be reinstated to the Official List of the ASX.

Further to the announcement released by the Company on ASX dated 11 December 2020, the Company is pleased to advise shareholders that the Company has executed a binding Deed of Sale with Kalgoorlie Mine Management Pty Ltd (**KMM**) in relation to the acquisition of the remaining 50% interest in Colour Minerals Pty Ltd (**CMPL**), the 100% owner of the Barkly-Babbler Copper-Gold Project located in the Northern Territory, Australia.

The remaining 50% interest is being acquired from KMM for proposed total consideration of 100 million shares (*on a post-consolidation basis*) and the issue of 50 million options (*on a post-consolidation basis*) exercisable at \$0.03 per option (*on a post-Consolidation basis*) expiring 3 years from the date of issue.

The completion of this acquisition will mean that BDI will own 100% of CMPL.

The reinstatement of BDI, which involves a consolidation of share and option capital, a share and option placement, a Share Purchase Plan (**SPP**) and the proposed acquisition of the remaining 50% interest in CMPL are all conditional on shareholder approval.

A Prospectus for the various issues of shares and options together with the SPP will be lodged with ASIC after the Company has held its shareholders meeting, subject to all resolutions held at the shareholders meeting have been approved by shareholders.

The Company is also pleased to advise that it will be lodging its proposed Notice of General Meeting of shareholders with the ASX shortly which once approved will then be made available to shareholders.

Shareholders are encouraged to contact the Company Secretary should they have any questions.

ABOUT THE BARKLY PROJECT

The Barkly Project is located approximately 45km east of the town of Tennant Creek in the Northern Territory and comprises two Exploration Licences, being EL 28620 (Barkly Project) and EL 30701 (Babbler Project) located in central Northern Territory, south of the Barkly Highway. The Barkly Project comprises two granted Exploration Licences EL28620 and EL30701. The Barkly Project is considered highly prospective for magnetite hosted gold-copper similar to other deposits found elsewhere in the Tennant Creek Goldfield.

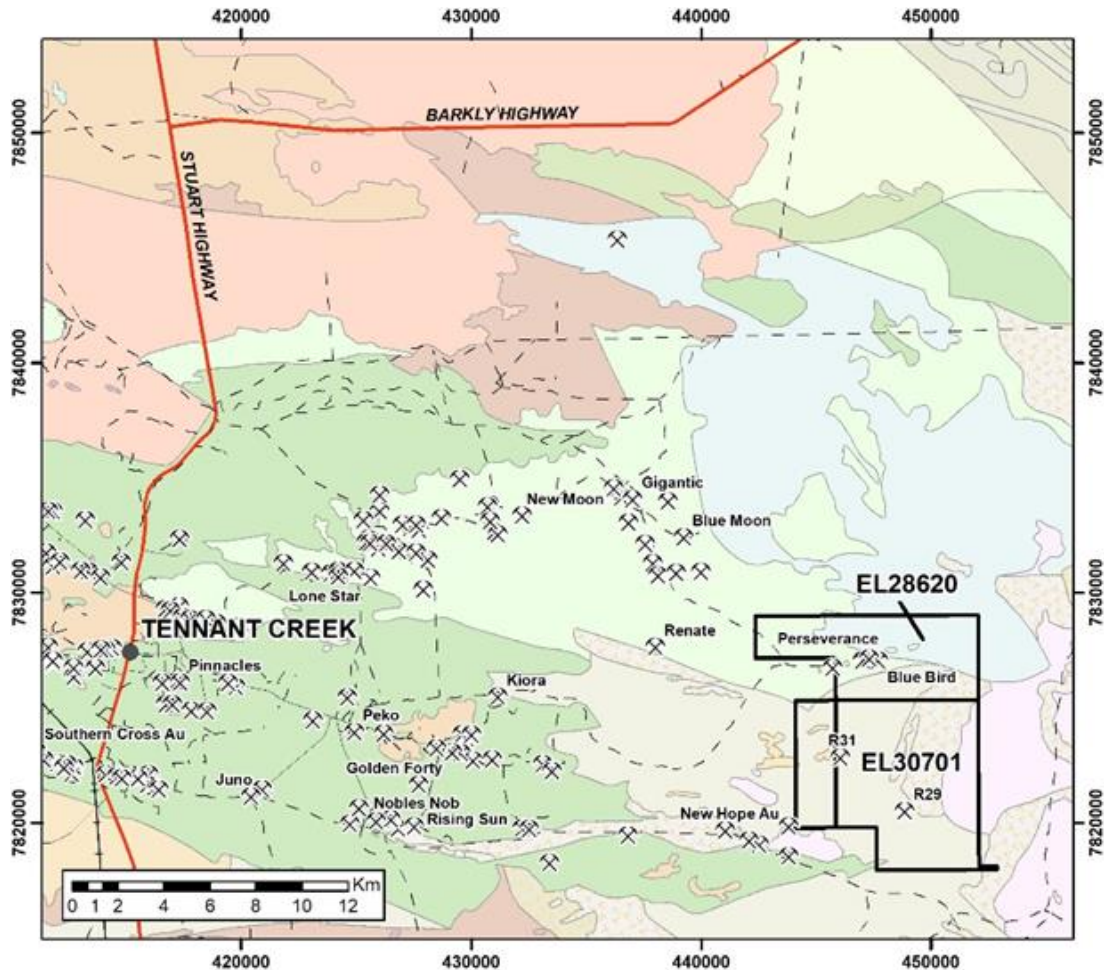

Figure 1: Barkly Project location plan

The current exploration focus of the Company is the Barkly Project.

EL28620 was formerly subject to a farm-in Joint Venture Agreement between Colour Mineral's Pty Ltd and Meteoric Resources NL with Colour holding a 70% interest. In 2019, Colour Minerals acquired Meteoric's 30% interest in EL28620 after which Blina Resources NL executed a legally binding heads of agreement to acquire a 50% interest in Colour Minerals.

EL30701 was previously held by Meteoric Resources. In 2019, Colour Minerals acquired Meteoric's interest after which Blina Resources NL executed a legally binding heads of agreement to acquire a 50% interest in Colour Minerals.

Ground magnetic and gravity surveys followed by soil geochemistry focussed attention on the Bluebird prospect which is a small outcropping ironstone body pitted by historic mining and prospecting. RAB drilling programs were conducted in 2005 and 2006 intersecting hematite ironstone and hematite-chlorite alteration over a 600m strike length with anomalous copper, gold and bismuth. RC and diamond drilling programs were conducted

between 2014-2016 by Blaze International Exploration¹. Significant intersections include: **20m @ 8.17g/t Au from 157m in BBDD002¹** and **16m @ 3.02% Cu, 0.65g/t Au from 139m in BBDD004¹**.

Recent drilling program at the Barkly Project

The Barkly-Babbler Project is considered highly prospective for magnetite hosted gold-copper similar to other deposits found elsewhere in the Tennant Creek Goldfield. A reverse circulation drilling program comprising seven (7) holes for 1,169.5m was recently completed at the advanced Bluebird Prospect.

The holes were drilled to in-fill and extend previous drilling that intersected high-grade copper-gold mineralisation within an ironstone unit on a west-northwest trending, steeply south dipping fault zone. Significant results from the drill program included²:

BBRC0015 20m @ 1.79g/t Au, 1.67% Cu from 156m²

Incl. 10m @ 2.87g/t Au, 2.32% Cu²

BBRC0019 15m @ 3.46% Cu, 0.61g/t Au from 172m²

Incl. 4m @ 6.28% Cu, 0.24g/t Au from 175m²

and 1m @ 4.80% Cu, 3.95g/t Au from 186²

(finishing in mineralisation at end of hole)

Significantly, drill hole BBRC0019 was drilled below BBRC013 which was previously the deepest and most westerly hole drilled at Bluebird. The hole intersected strongly hematite altered siltstone and ironstone from 172m to 187m at which depth the hole was abandoned due to in-hole caving. The hole ended in mineralisation with the last metre containing 3.9g/t Au and 4.8% Cu.²

Several of the other holes were also abandoned due to in-hole caving prior to reaching the mineralised zone or target depth. The difficult drilling conditions are caused by brecciated ironstone in the fault zone in combination with high water in-flow rates.

Refer to ASX Announcement dated 18 March 2020 released by the Company on the ASX announcements platform and titled "High-Grade Copper and Gold Intersected in Drilling Program at Bluebird".

The Bluebird Prospect has a prominent aeromagnetic and gravity anomaly along a west-north-west fault trend. At the surface the prospect is marked by an ironstone that forms a low hill with several shallow workings. At the surface the ironstone has low levels of gold and copper because of strong leaching that extends to a depth of over 100m. High copper and gold values have been intersected at a supergene enriched zone at a depth of approximately 120-150m vertical. Bluebird is one of several coincident magnetic and gravity anomalies along the fault. Previous drilling has been shallow reconnaissance style and is unlikely to have penetrated the strongly leached zone.

¹ Refer to ASX Announcement dated 24 September 2019 released by Blina Minerals NL and titled "STRATEGIC ACQUISITION OF HIGH-GRADE GOLD-COPPER PROJECT" released by the Company on the ASX announcement platform.

² Refer to ASX announcement dated 18 March 2020 released by Blina Minerals NL and titled "High-Grade Copper and Gold Intersected in Drilling Program at Bluebird" released by the Company on the ASX announcement platform.

Figure 2: Bluebird prospect cross section 448360E

Further RC and diamond drilling has been planned at Bluebird in order to complete those holes which were abandoned prior to reaching the target mineralised zone due to in-hole caving and to extend the copper-gold mineralisation along strike to the west. Drilling will also be conducted to test targets along the west north-west trending coincident magnetic and gravity anomaly.

Exploration and Development Strategy for Bluebird

The Company's primary objective is to complete further drilling in order to estimate a JORC compliant mineral resource and ultimately to develop a mining project at the Bluebird Prospect. Bluebird is the highest priority and most advanced prospect within the Barkly Project area. Systematic close spaced drilling will aim to accurately define the grade and the geometry of the known Au-Cu-Bi mineralisation.

COMPETENT PERSON'S DECLARATION

The information in this report that relates to exploration results is based on information compiled or reviewed by Mr Martin Bennett, who is a consultant of Colour Minerals Pty Ltd and a member of the Australian Institute of Geoscientists. Mr Bennett has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 edition of the 'Australasian Code of Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Bennett consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

ASX LISTING RULES COMPLIANCE

In preparing this announcement dated 25 January 2021, the Company has relied on the announcements previously made by the Company and specifically dated 24 September 2019 and 18 March 2020. The Company confirms that it is not aware of any new information or data that materially affects those announcements previously made, or that would materially affect the Company from relying on those announcements for the purpose of this announcement dated 25 January 2021.
